

## CLAIMS

1. A computer, comprising:
  - a clock module for producing a clock signal having two or more different frequencies;
  - a processor, operatively connected to said clock module, for processing instructions in accordance with the clock signal; and
  - a temperature sensor, operatively connected to said clock module, producing a temperature signal based on the temperature of said processor,wherein the frequency of the clock signal supplied to said processor varies depending on the temperature of said processor.
